

OBJECTIVE

The Clean Soccer Program is an ongoing campaign of the U.S. Soccer Federation which provides education, awareness, and training to all stakeholders - U.S. Soccer Athletes/ ENT, YNT and Senior National Teams, Coaches, Medical Staff, High Performance Staff, Clubs/ Universities and WNT and MNT representatives - on topics including but not limited to anti-doping, medication and supplements use/abuse, recreational drugs and alcohol to create a culture of health and safety within our game.

This program ensures the highest awareness, education, deterrence, and processes to protect athletes and the Federation regarding doping, and at the same time deliver on the core mission of preserving the safety and wellness of our athletes.

In compliance with national and international agencies, U.S. Soccer partners with FIFA, the World Anti-Doping Agency (WADA), the United States Anti-Doping Agency (USADA), and Drug Free Sport (DFS) to build a program for players, staff, and parents to bring greater awareness, education, training, testing, protocols, and prevention resources for healthier and safer outcomes.

The following policy has been adopted in collaboration with Drug Free Sport - www.drugfreesport.com

This Policy is reviewed and updated annually in cooperation with Drug Free Sport. For additional resources please visit:

COMMITTEE

NAME	TITLE
George Chiampas	Chief Medical Officer
Ron Shinault	Anti-Doping Medication Officer
Andy Guard	Anti-Doping Supplement Officer
Patrick Mannix	YNT Sport Scientist
Sarah Leslie	YNT Athletic Trainer
Greg Fike	General Counsel
Helen Syreggelas	Senior Compliance Manager
Rick Cost	High Performance Director

OBLIGATION

It is the duty of all Athletes, Athlete Support Personnel and other Persons (as those terms are defined in the World-Anti Doping Code), by virtue of their participation in the Olympic, Paralympic, Pan American, Parapan American or Youth Olympic Games, participation in an Event or Competition organized or sanctioned by an NGB, PSO or HPMO, participation on a national team, utilization of a USOPC Training Center, receipt of benefits from the USOPC or [NGB], inclusion in the Registered Testing Pool, or otherwise subject to the World Anti-Doping Code to comply with all anti-doping rules of WADA, the [IF], the USOPC, and of the U.S. Anti-Doping Agency (USADA), including the USADA Protocol for Olympic and Paralympic Movement Testing (USADA Protocol) and all other policies and rules adopted by WADA, the [IF] and USADA. If it is determined that an Athlete, Athlete Support Personnel, or other Person may have committed a doping violation, the individual agrees to submit to the results management authority and processes of USADA, including arbitration under the USADA Protocol, or to the results management authority of the [IF], if applicable or referred by USADA. In addition, Athletes agree to submit to drug testing by the [IF] and/or USADA or their designees at any time and understand that the use of methods or substances prohibited by the applicable anti-doping rules make them subject to penalties including, but not limited to, disqualification and suspension.

EDUCATION

Our goal is to assure that each stakeholder is educated and trained on the most up-to-date best practices for a drug free sport. Along with training we provide resources available to athletes, which outlines medical and high-performance staff roles and responsibilities to the player, athletes' responsibilities, and the federation responsibilities under the USADA and WADA code.

We will build several touchpoints upon entry to the U.S. Soccer athlete network and continue with multiple touchpoints to emphasis the level of importance and highlight the culture of anti-doping in line with the highest standards for a National Governing Body (NGB).

- I. All High-Performance Department Staff (FTE), require mandatory on-line training and certification as part of the on boarding process - USADA Health-Pro Advantage: [*Anti-doping Education for the Health Professional \(USADA Coaches Advantage\)*](#)
- II. All U.S. Soccer physicians are required to take the USADA Health-Pro Advantage - [*Anti-doping Education for the Health Professional*](#).
- III. Coaches and players receive a communication regarding the athlete's code of conduct, roles and responsibilities as a National Team athlete. Additionally, key resources and links are provided for their use.
- IV. Quarterly, the High-Performance Department sends to athletes in the National Team pool a newsletter on various topics related to Sports Medicine and Performance.
- V. U.S. Soccer's website www.recognizetorecover.org includes additional resources for players and staff to reference and provide direction for broader education.

- VI. The organization builds an annual campaign under the federation's umbrella and utilizes social media to spread the culture and message of drug free sport and wellness.
- VII. The Federation partners with Drug Free Sport <https://www.drugfreesport.com/> to provide comprehensive educational infographics, emails and in-person trainings for players, coaches and staff. Additionally, infographics should be utilized in National Team camps in areas of high visibility.

MEDICATIONS

- I. U.S. Soccer has an Anti-Doping Medication Officer who works with the Chief Medical Officer on the review and securing of over the counter and prescription medications to mitigate the risk of an adverse doping incident. Additionally, the Anti-Doping Medication Officer creates educational content and awareness programs.
- II. All medications ordered are screened and evaluated by the CMO and Anti- Doping Officer.
- III. All medications ordered from a single distributor and based on a reviewed and screened medication document (done annually).
- IV. Any medications ordered separate from approved list must be screened against the WADA Drug Reference Online list and flagged by the distributor company. The only way to move forward with the securing of these medications is to provide in writing the need and whether a Therapeutic Use Exemption (TUE) is warranted.
- V. While there are medications needed for acute medical illnesses that are prohibited, exemptions are possible based on prioritizing players health and safety. These types of medications will be designated with a label to be readily identifiable to the medical staff.
- VI. All prescription medications will be stored in a secure location with limited access, tracked, and under the management of a medical professional in possession of a federal DEA license.
- VII. The Electronic Medical Record (EMR) will have steps to review medications and needs of a TUE or Retro TUE based on the medical circumstances.
- VIII. Upon entry into a camp or tournament, individual players will be asked to provide a list of any current medications, vitamins/ supplements they are taking. Players will be informed by a medical staff member whether a TUE is needed or already on file.
- IX. Medication Kits will have a medication log to be completed by the physician and/or designated medical lead in camp and confirmed with the ATC. The medication logs will be sent and collected by the Anti-Doping Officer and kept on file.
- X. Within the prescription medication dispensing process in a player's EMR, there is stepwise approach for dispensing medication in compliance with TUE requirements.

Therapeutic Use Exemption

- I. All National Team players will be screened by the designated team ATC and medical team for medications and establish if there any TUE needs or current TUE's in place.
- II. If a TUE is warranted, the Anti-Doping Medication Officer (ADMO) and CMO should be contacted to review the matter and assist in the process.
- III. If a medication for acute medical matters or acute life-threatening circumstances are occurring, the safety of the player is the highest priority and appropriate medication will be administered. Once the player is stabilized, a retro-TUE request will be submitted within the subsequent 24 hours. This process should involve the ADMO and CMO.
- IV. All TUE's will be stored by the Anti-doping compliance officer in a secure and HIPAA compliant location for a period of time determined by Office of General Counsel.
- V. If a player requires a new or change in medication, it is the player's responsibility to communicate to the prescribing physician that they are an elite athlete and potentially subject to anti-doping testing. Additionally, that information should be shared with U.S. Soccer for updated TUE information where applicable.

ADDITIONAL TUE CONSIDERATIONS

- I. Athletes with Attention Deficit Disorder (ADHD) requiring medications such as stimulants will require a record of evaluation and confirmation of diagnosis prior to the written prescription and or dissemination of a stimulant.
- II. Additionally, a TUE must be secured and on file prior to the above.
- III. The documentation from the athlete's diagnosis should also be on file with U.S. Soccer.

SUPPLEMENTS

- I. U.S. Soccer will have an Anti-Doping Supplement Officer who will work with the CMO and HPD on the screening, securing, dissemination and tracking of supplement use within our National Teams. Additionally, the Anti-Doping officer will work on educational content and awareness programs under the direction of the CMO to be disseminated to Sports Performance staff, players and coaches.
- II. All National Team supplement products will be reviewed and approved by the Anti-Doping Officer, High Performance Director, and CMO prior to their distribution by any High-Performance staff member to National Team athletes. A Federation Supplement Document will be created annually and approved by the above-named U.S. Soccer staff.
- III. Supplements that are NSF and/or Informed Choice certified will be allowed for use by High Performance Staff.
- IV. Supplements that are disseminated to players will be tracked on a log and sent back to the Anti-Doping Supplement Officer post camps for security and record purposes. This is the responsibility of the Sports Scientist in each camp.

- V. Sport Scientist staff will engage in frequent communication with National Team athletes' club/university to update supplements being taken by National Team players in the club environment and whether or not they are NSF/Informed Sport certified. This process is of particular importance prior to major tournaments and events (i.e. World Cups).
- VI. Ultimately, It is the athlete's responsibility with regards to the consumption and/or use of supplements. The athlete and their club/university should bring forward use of any supplement with as much detailed information as possible.
- VII. Sports Science staff will communicate in advance of camp and request information surrounding current and past supplement usage.

FIFA ANTI-DOPING COMPLIANCE

In doping-related matters, the FIFA Anti-Doping regulations apply in full. In the event of any discrepancy between national regulations and the FIFA Anti-Doping Regulations, the provision set out in the FIFA Anti-Doping Regulations shall prevail.

Medications v. Supplements

Learn the difference between medications and supplements to better understand why supplements are risky for athletes.

FDA Review

The U.S. Food and Drug Administration (FDA) maintains a comprehensive evaluation process for medications, assessing everything including the packaging, the design of clinical trials, and the manufacturing conditions.

Reliable Ingredient Labels

Medications must list every ingredient on the Drug Facts label, and these ingredients are confirmed through quality control analysis by the FDA.

Proven Safe Before Sale

To help protect consumers, medications are subject to strict premarket regulation, which means they go through a rigorous safety and efficacy evaluation process before reaching consumers.

Eliminate Your Risk: Global DRO

Global Drug Reference Online (Global DRO) allows you to search the prohibited status of specific medication brands and ingredients.

Get started at:

www.GlobalDRO.com

No FDA Review

Supplements don't undergo any evaluation process or testing by the FDA before they are made available to consumers. In fact, most supplement companies are never inspected by the FDA to ensure manufacturing best practices.

Unreliable Ingredient Labels

Manufacturers may misidentify prohibited substances on Supplement Facts labels, or they may fail to list prohibited substances altogether.

Prove Unsafe to Stop Sale

Because they are regulated post-market, supplements are sold to consumers until it becomes evident that they are harmful following consumer adverse event reporting. Even then, supplements with illegal or dangerous ingredients may remain on shelves for years.

Minimize Your Risk: Supplement 411

Supplement 411 offers various tools to help athletes realize, recognize, and reduce supplement risk, including a High Risk List of examples of products containing prohibited substances:

www.Supplement411.org/HRL

Re: Anti-Doping

Dear National Team Athlete

As a National team athlete, we want to remind you but also guide you about your individual responsibility in regard to supplements, prescription medications and other holistic or non-traditional pharmaceuticals. As you already know, you are eligible for “In and Out” of competition drug testing and therefore due diligence and understanding is in your overall benefit.

In regard to **any supplement use** there are United States standards that helps confirm what is on the Label matches what is in the bottle. In addition, testing is conducted to confirm that there are no unsafe contaminants such as heavy metals, pesticides and herbicides in the product. For more information and to check on any specific products go to www.nsf sport.com. As a professional athlete it is recommended that you do not take any product or supplement that does not have NSF certification.

Regarding any **prescription medications or over the counter medications**, prior to any use of medications ensure a complete conversation and full understanding of its use and also ascertain if that medication for any reason is considered a “banned substance”. While many substances are banned for performance enhancement purposes there are other prescription and over the counter medications which may appear normal but still might be banned for various reasons. Additionally, know that if a medication is clinically needed and appropriate based on your physicians’ determination a Therapeutic Use Exemption (TUE) can be requested on your behalf so that you can begin taking the medication. Do not take any medication unless you have had clear conversations with your physician that you are an elite athlete and may be subject to performance enhancement drug testing. For more information and to answer any questions you can go to www.usada.org to assist in navigating your responsibilities, whereabouts and list of banned substances.

Finally, recognizing the potential use of non-traditional or **“natural” medications, oils and other similar products**, it is important to highlight that the vast majority of these uses and or containing ingredients have not been tested from a doping perspective and thus may put yourself in potential risk from consumption or use.

In closing, always know that our High Performance staff (physicians, trainers, sport scientists) are available to assist and answer questions in any of the above circumstances. They are also able to guide and submit any TUE documentation. Your safety, performance and wellbeing is our highest priority and therefore please don’t hesitate in asking any questions if you are unsure.

Sincerely

Dr. George Chiampas (DO Chief Medical Officer)
